

Knowgrph

Knowgrph

Brief in. Campaign out. A node canvas where Markdown becomes images — and images become

Not a replacement. An extension.

Watch on YouTube: [airvio | rich media canvas for global emerging market creators](#)

The problem — the middle is empty

Every creator eventually hits a ceiling. The tool that got them here can't take them further.

	Too sophisticated
Tool	Node-graph editors · Higgsfield
Learning curve	Hours to days
Local context	Possible but manual

LOCAL CONTEXT	POSSIBLE BUT MANUAL
Variants	Manual wiring
Who it's for	Technical users

CapCut is fast for one video. It breaks when a creator needs ten — same brand, three m
Node-graph editors are too steep. Higgsfield is powerful but context-blind — it doesn't
your brand font is not the default.

Knowgrph is the middle path — structured enough to scale, simple enough to start in

Who it's for — global emerging market creat

The ICP is not a geography. It's a situation: **a solo creator, freelancer, or one-person I**

This person exists in:

- Southeast Asia (Jakarta, Manila, Bangkok, Ho Chi Minh City, Singapore)
- Latin America (Mexico City, São Paulo, Bogotá, Buenos Aires)
- MENA (Cairo, Riyadh, Lagos, Dubai)
- South Asia (Mumbai, Dhaka, Karachi)

- Frontier markets everywhere — including the US creator economy's long tail and the (

What they share: they already use CapCut. They've hit a ceiling. They want to ship more explain it every time.

They don't want to replace CapCut. They want something that picks up where Cap

The insight — extend, don't replace

Knowgrph augments the CapCut workflow. It doesn't compete with it.

A CapCut creator already knows what good video looks like. Knowgrph handles the part

If you can write a scene plan as structured Markdown, then:

- **AI becomes the orchestrator** — text node produces localised scene plans, image nodes
- **The brief becomes brand memory** — palette, font, tone, cultural context, locale — local
- **Unstream change → downstream recompute** — swap one field, every variant unda

upstream change + downstream recompute wrap one node, every variant spread

TEXT

CapCut creator → hits variant ceiling
→ gets Knowgrph template **from** a creator **group**
→ runs once → ships **6** variants
→ shares template forward → **new** creator joins

Template sharing is the distribution loop, same as CapCut templates spread today. Ever

What it does

One Markdown brief. Three pipeline stages. N variants.

MERMAID

The brief carries three locked layers:

MARKDOWN

Campaign brief · variant: US-WEST

Brand: SkyKids · Palette: amber, sand · Tone: frontier · adventurous

Product: RoboDrone X1 · Age: 8-14 · Price: \$49

– parent layer –

Trust: obstacle-sense / 20-min flight / crash-proof shell

– child adventure layer –

Shot 1: boy on mesa cliff, sunrise, drone launches

Shot 2: ghost mustang herd charges across sky-plain above canyon

Shot 3: drone banks through cathedral arch light beams

CTA: "Ship it before school break!" · Format: 9:16 · Platform: TikTok US

Swap **variant: US-WEST** → **variant: CARIBBEAN** . Hook rewrites. Keyframes

Demo — RoboDrone X1 · Three Skies

Same drone. Three worlds. Three completely different children. Three completely different

US · Wild West frontier mesa

- Real scene: boy on sandstone cliff at sunrise, canyon below
- Multiverse: ghost mustang herd charges silver across a sky-plain above the canyon; s
- Parent trust: crash-proof shell, obstacle-sense, 20-min flight
- Hook: *"Lead the ghost herd. Own the frontier."*

Caribbean · island tempest

- Real scene: girl on white-sand beach, tropical storm rolling in off turquoise water
- Multiverse: drone punches through the rain wall; mermaid queen rises from the deep
- Parent trust: waterproof-rated, obstacle-sense, crash-proof shell
- Hook: *"Fly the tempest. Serve the queen."*

Singapore · Marina Bay → RoboTown

- Real scene: girl on Marina Bay promenade at blue-hour dusk
- Multiverse: Merlion morphs to 100m chrome AI sentinel with amber scanning eyes; city
- Parent trust: precision sensors, 20-min flight, crash-proof shell

Architecture

Client-first. The browser handles parsing, rendering, and orchestration. AI APIs called d
